

# COMMERCIAL & FLAT ROOF SNOW REMOVAL

While your commercial flat roof protects you, your employees and your equipment from the elements it is also bearing the burden of snow accumulation on your roof. Your buildings structure and roof are under a great deal of stress from the weight of the snow. It is important in the winter season to pay special attention and secure professional snow removal and to schedule regular maintenance to provide preventative measures

**Hart Roofing offers professional and effective snow removal services that will keep your commercial building safe.**

Commercial and industrial buildings are typically flat roofs and they are much more susceptible to roof damage, roof failure, roof leaks or even roof collapse.

## WHAT YOU NEED TO KNOW

Snow melts, it freezes and then is covered by a new layer of snow. The process repeats until the ice sheet becomes too heavy for the roof to shoulder. The imbalance of drifting snow can cause one part of a roof to give way.

Hasty and improper snow removal can cause damage to the roof membrane. In our cold climate your commercial roof may need to have snow removed a few times throughout the winter. **It is best to consider when to remove snow from a flat roof and Hart Roofing can create a SNOW REMOVAL PLAN tailored to your needs.**

The difference is in the details.
